The Pumping World's One Stop Shop!™

Typical Installation

The 2100-DC is truly the best value in flood protection. Unlike other manufacturer's entry level systems and the ones you find at the hardware store, the 2100-DC utilizes the very best components.

The heavy duty 12V DC pump and adjustable switch are much more reliable while pumping more water than the leading brands.

The 8 amp heavy duty charger unit uses a sophisticated processor based charge that will not damage deep cycle batteries, even maintenance free AGM type. A built in alarm and indicator lights will let you know the status of your system at all times.

The pump base avoids having to hang the pump from a pipe or leave it on the bottom of the basin where it can become clogged from debris.

Power+ Battery

For optimal performance, install Metropolitan Industries' maintenance-free AGM **Power+** Batteries (not included).

EXTENDED TWO-YEAR WARRANTY WHEN PURCHASED WITH POWER+ AGM BATTERIES.
