## N-12T ST IB PIPE (PER AASHTO)

N-12 corrugated dual-wall pipe was introduced in 1987. Today's N-12 pipe offers significant performance advantages, plus the best soil-tight joint in the industry. Available in diameters from 4" to 60" (100 to 1500 mm ), N-12 pipe is replacing reinforced concrete pipe as a preferred product for storm water applications.

ADS N-12 pipe contains a superior built-in bell-and-spigot joint. The joints are sealed by high-quality, factory-installed rubber gaskets that meet all the requirements of ASTM F477. A polyethylene bell minimizes joint distortion. The chipping and cracking that is common to concrete bells, is eliminated.

## APPLICATIONS:

Storm Sewers
Retention/Detention
Golf, Turf \& Recreation
Culverts/Cross Drains
Grain Aeration
Waterways
Ditch Enclosures

Slope/Edge Drains
Mining/Forestry/Industrial
Foundation Drains
Downspouts/Roof Drainage
Land Reclamation
Terracing

## FEATURES:

- 4"- 60" (100 to 1500 mm ) diameters available
- $6 \mathrm{~m}(19 \mathrm{ft}, 8 \mathrm{in})$ or $4 \mathrm{~m}(13 \mathrm{ft})$ lengths available
- Bell-and-spigot joint design
- In-line bell design
- Exceptional joint strength
- Excellent abrasion and corrosion resistance
- Light weight
- Fast installation times
- Structural strength that will support $\mathrm{H}-25$ live loads with $1^{\prime}(0.3 \mathrm{~m})$ minimum cover 54" and 60" (1350 and 1500 mm ) pipe requires 2' ( 0.6 m ) cover for $\mathrm{H}-25$ loads

ADS Service: ADS representatives are committed to providing you with the answers to all your questions, including specifications, and installation and more.

## BENEFITS:

- Variety of diameters and lengths that will fit in any project
- Joint only requires lube for fitting - ends are pushed together for easy field installation
- Unlike pipes from other manufacturers, there are no additional gasket materials, grout or sealing bands to transport and apply
- Installation cost savings from lower shipping costs, fewer people, and less heavy equipment required
- Hydraulic efficiency from smooth interior
- Long-term durability of HDPE

## ADS N-12 ${ }^{\circledR}$ ST IB PIPE (PER AASHTO) SPECIFICATION

## SCOPE

This specification describes 4- through 60-inch (100 to 1500 mm ) ADS N-12 ST IB pipe (per AASHTO) for use in gravity-flow drainage applications.

## PIPE REQUIREMENTS

ADS N-12 ST IB pipe (per AASHTO) shall have a smooth interior and annular exterior corrugations.

- 4- through 10-inch ( 100 to 250 mm ) shall meet AASHTO M252, Type S.
- 12- through 60-inch ( 300 to 1500 mm ) shall meet AASHTO M294, Type S or ASTM F2306.
- Manning's " $n$ " value for use in design shall be 0.012.

## JOINT PERFORMANCE

Pipe shall be joined using a bell \& spigot joint meeting AASHTO M252, AASHTO M294, or ASTM F2306. The joint shall be soil-tight and gaskets, when applicable, shall meet the requirements of ASTM F477. Gaskets shall be installed by the pipe manufacturer and covered with a removable wrap to ensure the gasket is free from debris. A joint lubricant supplied by the manufacturer shall be used on the gasket and bell during assembly.

## FITIINGS

Fittings shall conform to AASHTO M252, AASHTO M294 or ASTM F2306. Bell and spigot connections shall utilize a spun-on or welded bell and valley or saddle gasket meeting the soil-tight joint performance requirements of AASHTO M252, AASHTO M294 or ASTM F2306.

## MATERIAL PROPERTIES

Virgin material for pipe and fitting production shall be high density polyethylene conforming with the minimum requirements of cell classification 424420C for 4- through 10-inch ( 100 to 250 mm ) diameters, or 435400C for 12- through 60 -inch ( 300 to 1500 mm ) diameters, as defined and described in the latest version of ASTM D3350, except that carbon black content should not exceed $4 \%$. The 12- through 60-inch ( 300 to 1500 mm ) virgin pipe material shall comply with the notched constant ligament-stress (NCLS) test as specified in Section 9.5 and 5.1 of AASHTO M294 and ASTM F2306 respectfully.

## INSTALLATION

Installation shall be in accordance with ASTM D2321 and ADS's published installation guidelines, with the exception that minimum cover in trafficked areas for 4 - through 48-inch ( 100 to 1200 mm ) diameters shall be one foot ( 0.3 m ), and for 54 - and 60 -inch ( 1350 and 1500 mm ) diameters, shall be $2 \mathrm{ft}(0.6 \mathrm{~m})$ in single run applications. Backfill for minimum cover situations shall consist of Class 1, Class 2 (minimum 90\% SPD) or Class 3 (minimum $90 \%$ SPD) material. Maximum fill heights depend on embedment material and compaction level; please refer to Technical Note 2.01. Contact your local ADS representative or visit our website at www.ads-pipe.com for a copy of the latest installation guidelines.
